WHEREAS, heart disease is the leading cause of death for men, women, and people of most racial and ethnic groups in the United States. According to the Centers for Disease Control and Prevention (CDC), about 681,000 people in the United States died from heart disease in 2023 - that's roughly 1 in every 5 deaths; and

WHEREAS, American Heart Month is observed to raise awareness of the importance of a healthy heart and to encourage healthy habits that help reduce the risk of heart disease. The warning signs for heart disease have been known to appear when people are as young as 18 years old. Red flags such as high blood pressure should be taken seriously, and healthy habits should be adopted like getting 30 minutes of exercise every day, and talking with your doctor to develop healthy eating habits that promote heart health; and
