IAPro and BlueTeam System Requirements

Installation Specialists:

Ray Kelley

E: rkelly@iapro.com

O: 800-620-8504 Ext 706

Steve Hull

E: shull@iapro.com

O: 800-620-8504 Ext 752

CI-Technologies Help Desk: <http://helpdesk.iapro.com>

Database server information and database engines supported

- Microsoft SQL Server 2005, 2008, 2008R2, 2012 or higher
- Microsoft SQL Server Express (free from Microsoft, but a 10GB Database limit) or greater
- Oracle 8 or higher
- IBM DB2
- Rbase - (Usually for smaller installations and not supported by the web app)

Database server requirements

- SQL Server/Oracle/MSDE - The IAPro databases do not require a separate server. They can be located on an existing SQL Server at your agency. Generally, IAPro produces a relatively low load on the database server, especially since the number of concurrent users is usually quite low.
- SQL Server/Oracle/ - Hardware requirements are dictated by Microsoft or Oracle.
- SQL Server 7/2000/2005/2008/2012/Express - Requires Windows NT/2000, 2003, 2008, 2012 Server
- Oracle - Can run under Windows/Unix/Linux

Memory/Space recommendations

- In terms of memory on the server, we recommend at least 2GB. 4GB is better. In terms of drive space, we recommend at least 10GB of free space for the database. This space will be sufficient for at least five years' worth of data.
- The application also allows storage of linked documents, including Word docs, PDF docs, Excel file, photos, etc. We recommend at least 100GB of free space for these items.

BlueTeam web application requirements

- Microsoft IIS 6 or higher including IIS 8
- Uses OLE DB to connect with MS SQL Server/MSDE/Oracle database engines
- On the client we support Microsoft IE 6+ /Firefox 2+ /Safari, Opera...other HTML compliant browsers also may work well with the application
- JavaScript and Cookies must be enabled
- No ActiveX or other proprietary technology is used
- Microsoft .NET framework 4.0 or on Windows 2008 and higher .NET framework 4.5
- 2GB of RAM or higher recommended

IAPro and BlueTeam System Requirements

IAPro Windows's client application requirements

- All versions of Microsoft Windows from Windows XP to Windows 10
- Minimum 1GB RAM Recommended
- Pentium-class processor
- At least 200MB of free drive space recommended

Other requirements

- IAPro uses a shared network folder to store digital images and/or MS Word documents. The shared folder can be hidden and should be locked-down using NTFS or Novell file security, allowing only IAPro users access to this folder. Usually a security group is created in order to ease management over time.
- IAPro accesses the shared folder either through a mapped drive letter or through a UNC file path.
- If using the web application, we recommend that the shared folder be created on the web server to ease configuration of security information. Not required.

Backup recommendations

- Backups of the IAPro database and linked image/Word files is the responsibility of the customer
- We recommend backing up the IAPro database 3 times daily to the server's hard drive using built-in back-up utilities of SQL Server or Oracle. These backup files should then be backed-up nightly to tape or some other off-line backup system

Hardware Requirements

Our hardware requirements are largely driven by Microsoft SQL Server's requirements. These requirements can be found at the below web link:

- • SQL Server 2012 - <http://msdn.microsoft.com/en-us/library/ms143506.aspx>
- • SQL Server 2008-R2 - [http://msdn.microsoft.com/en-us/library/ms143506\(v=sql.105\).aspx](http://msdn.microsoft.com/en-us/library/ms143506(v=sql.105).aspx)
- • SQL Server 2008-R1 - [http://msdn.microsoft.com/en-us/library/ms143506\(v=sql.100\).aspx](http://msdn.microsoft.com/en-us/library/ms143506(v=sql.100).aspx)
- • SQL Server 2005 - [http://msdn.microsoft.com/en-us/library/ms143506\(v=sql.90\).aspx](http://msdn.microsoft.com/en-us/library/ms143506(v=sql.90).aspx)

It's important to note that the vast majority of our customers do not purchase dedicated hardware for IAPro. Most customers install the databases on an existing SQL Server which hosts, perhaps, several other application databases.

Installation Details

CI Technologies will remotely install the server-side components. We will utilize a remote desktop service called GotoMeeting. A normal installation takes approximately 2 hours to complete. We will need someone on your end with Administrative privileges to assist with the installation. If we are unable to remote into your server, we will assist you verbally with the installation.
