Customer Awareness and Troubleshooting Sheet

The following is a list of items that Holiday Lighting Designs has compiled to inform you the customer of some very important issues pertaining to your holiday lighting program.

Tree/Hedge Trimming

To ensure that your holiday lighting and decorations are installed properly your trees must be trimmed prior to the installation of your lighting. Please have your entire tree trimming **completed** by October 1st. If trees require trimming in order to install lights, there will be a \$50.00 charge per tree.

Electrical Requirements

We here at Holiday Lighting Designs want your lighting to work just as much as you do, but with a faulty electrical system that just can't happen. Although you may see outlets at the locations required they may not be able to handle the amount of amperage needed for your holiday lighting. Your electrician is the only one to determine if your circuits are suitable for your holiday lighting. Please have your electrician verify that all outlets are in proper working order as well. Should your electrician have questions please have them call our office at 561-734-7277.

Service of your Holiday Lights

Holiday Lighting Designs understands that your holiday lighting is only up and lit for a limited amount of time and that you, **OUR VALUED CUSTOMER**, want any service issues to be addressed as quickly as possible. We have taken several steps to help Minimize service issues; however, if service is required please call our **24 hour service line at 561-734-7277** so that we can address your service needs as quickly as possible.

GFCI (Ground Fault Circuit Interrupter)

A GFCI is a device that has been installed to aid against electrical shock. When your holiday lights or outlets get wet from rain or sprinkler systems your GFCI will trip and need to be reset. Please have your sprinkler times changed to a time when your holiday lighting is off. Mornings are a good time. In order to reset your GFCI outlet simply depress the "red" button. This can only be done when lights and outlets are dry. **Holiday Lighting Designs is not responsible for resetting the GFCI outlets.**

Lights do not turn off

Some customers have holiday lights that remain lit 24 hours a day. The main cause is that the electrical system is not hooked up to a time clock or photocell. Holiday Lighting Designs will install temporary timers at a charge of \$25.00 each should you want this option.

Disconnecting and or Lighting Removal

Holiday Lighting Designs will send an email to you between January 2nd -4th asking when you would like to have your lights **TURNED OFF**. This does not mean removed. All lighting will be removed between the first week of January to the first week of February unless otherwise indicated.
