## Introduction

### Project Information

The project consists of one (1) lot located on the Southwest corner of W. Copans Road and NW 55<sup>th</sup> Avenue in the municipal boundaries of the City of Margate, FL. The lot folio number is 4842-30-05-0020, located in the jurisdiction of the City of Margate and is currently zoned Transit Oriented Corridor (TOC-G). The lot contains 3.60 acres in total, of which approximately 1.96 acres is developed as a convenience store with a gas station. The remaining 1.64 acres proposes the construction of a four thousand four hundred forty-three (4,443) square foot restaurant and a four thousand (4,000) square foot general retail. The parcel to the west will be incorporated into the design and calculations to treat this area as one large system. This is to provide adequate water quality treatment and attenuation for both parcels. To distinguish between the parcels the Wawa Site will be referred to as the “West Site” and the proposed Culver’s Site will be referred to as the “East Site”. The required storage volume to provide the 5 year – 1 hour level of service for the parking lot area will be stored in an underground detention system.

### Site Conditions

#### Existing Conditions

The existing 1.96-acre west site is currently a gas station/convenience store with two (2) existing driveways providing access to both State Road 7 and Copans Road, there is currently cross access driveways providing access between the west site and the east site. The site is approximately eighty-four percent (84%) impervious and sixteen percent (16%) pervious. The existing 1.68-acre site is currently vacant with a driveway connecting the property to the west to NW 55<sup>th</sup> Avenue. The site is approximately ninety one percent (91%) pervious and nine percent (9%) impervious. There is currently (1) existing driveway along NW 55<sup>th</sup> Avenue, which is a two-way North Bound (NB) arterial. Both parcels combined generates a Runoff Curve Number (RCN) of 91.

#### Proposed Conditions

The proposed improvements include the construction of a four thousand four hundred forty-three (4,443) square foot restaurant and a four thousand (4,000) square foot general retail. The existing accessway from NW 55<sup>th</sup> Avenue to the property on the west side will be demolished and

incorporated into the proposed construction. Under proposed conditions, the site will be seventy-three (73%) percent impervious and twenty-seven (27%) percent pervious grass and open space. With these improved conditions the two parcels will generate a new RCN of **94**.

#### Water Table

Due to tailwater conditions, the control elevation and groundwater table elevation have been set at 8.00 ft, NAVD88, as discussed with Broward County during preliminary meetings in July and August of 2018. This is above the 7.0 elevation in the published water table map and above the 6.5 elevation of the Broward County future groundwater conditions map. The Cocomar Water Control District maintains the canal system at 7.00 ft, NAVD88 during wet season and 8.00 ft, NAVD88 during the dry season.

#### Exfiltration Rates

The proposed storm water improvements associated with this project will incorporate the use of exfiltration trenches. Geotechnical borings were performed and tests based on constant head exfiltration test was used to estimate the “K” value. Based on the field data, a “K” value of  $12.5 \times 10^{-4}$  cfs/sqft-ft and  $4.33 \times 10^{-4}$  cfs/sqft-ft of head was used in the design of the exfiltration trenches for this project. Please refer to attached geotechnical report.

#### Flood Elevations

The FEMA FIRM map 12011C0165H indicates the site to be in a 0.2% Flood Hazard. FEMA panel number 12011C0165H has been enclosed for reference.

## Land Use Calculations

### Existing Conditions

Area Description	Square Feet	Acreage
Building	12,996	0.30
Sidewalk / Paving	64,853	1.49
Grass / Open Area	79,662	1.83
<b>Total Area</b>	<b>157,511</b>	<b>3.62</b>

### Proposed Conditions

Area Description	Square Feet	Acreage
Building	21,439	0.49
Sidewalk / Paving	102,593	2.36
Grass / Open Area	33,479	0.77
<b>Total Area</b>	<b>157,511</b>	<b>3.62</b>

## Soil Storage and Runoff Calculations:

### Existing Conditions

The existing soils are comprised of Pompano Fine Sand and Margate Fine Sand; therefore, flatwoods soils will be used. According to the SFWMD Manual, Page F-1, the depth to water table is 1.0' corresponding to developed available storage of 0.45".

$$\% \text{Impervious} = \frac{1.79}{3.62}$$

$$\% \text{Impervious} = 0.49$$

$$\begin{aligned} S &= S_{Comp}(1 - \% \text{Impervious}) \\ S &= 0.45"(1 - 0.49) \\ \therefore S &= \mathbf{0.2295} \end{aligned}$$

$$CN = \frac{1000}{S + 10}$$

$$CN = \frac{1000}{(0.2295 + 10)}$$

$$\therefore CN = \mathbf{97.7565}$$

### Proposed Conditions

The existing soils are comprised of Pompano fine sand and Margate fine sand; therefore, flatwoods soils will be used. According to the SFWMD Manual, Page F-1, the depth to water table is 1.0' corresponding to developed available storage of 0.45".

$$\% \text{Impervious} = \frac{2.85}{3.62}$$

$$\% \text{Impervious} = 0.79$$

$$\begin{aligned} S &= S_{Comp}(1 - \% \text{Impervious}) \\ S &= 0.45"(1 - 0.79) \\ \therefore S &= \mathbf{0.0945} \end{aligned}$$

$$CN = \frac{1000}{S + 10}$$

$$CN = \frac{1000}{(0.0945 + 10)}$$

$$\therefore CN = \mathbf{99.0638}$$

## **METHODOLOGY**

### **Water Quality**

Per South Florida Water Management District design criteria for commercial properties, water quality treatment is required for wet detention areas. The wet detention volume shall be provided for the first inch of runoff from the developed project, or the total runoff of 2.5 inches times the percentage of imperviousness, whichever is greater. The required water quality volume of 0.57 ac-ft will be met in the proposed exfiltration trench and concrete vault on site which provides 2.51 ac-ft. of storage combined.

- **1 in. x Site**

$$\left( 1 \text{ in.} \times 3.62 \text{ ac.} \div 12 \frac{\text{in}}{\text{ft}} \right) = 0.30 \text{ ac.-ft}$$

**∴ 0.30 ac.-ft. Required Water Quality**

- **2.5 in. x (% Impervious)**

- Site Area for Water Quality Calculations

$$= (\text{Total Site} - \text{Roof Area})$$

$$= (3.62 \text{ ac} - 0.49 \text{ ac})$$

$$= 3.13 \text{ ac}$$

- Impervious Area for Water Quality Calculations

$$= (\text{Site Area for Water Quality} - \text{Pervious})$$

$$= (3.13 \text{ ac} - 0.77 \text{ ac})$$

$$= 2.36 \text{ ac}$$

- Percentage of Impervious for Water Quality Calculations

$$= (\text{Impervious Area for WQ} / \text{Site Area for WQ}) \times 100\%$$

$$= (2.36 \text{ ac.} \div 3.13 \text{ ac}) \times 100\% = 75\%$$

$$= (2.5 \text{ in.} \times 0.75) = 1.88 \text{ inches to be treated}$$

- Inches to Be Treated × Total Site Area = Treatment Volume  
 $= (1.88 \text{ in.} \times 3.62 \text{ ac.}) = 6.81 \text{ ac.-in.}$   
 $= \left( 6.81 \text{ ac.-in.} \div 12 \frac{\text{in}}{\text{ft}} \right) = 0.57 \text{ ac.-ft}$

∴ **0.57 ac.-ft. Required Water Quality**

- 0.57 ac.-ft. > 0.30 ac.-ft.
- 0.57 ac.-ft ← Controls**

**Water Quality Treatment Required = 0.57 ac-ft**

**Water Quality Treatment Provided = 0.95 ac-ft**

## Dry Pre-treatment

Per South Florida Water Management District design criteria, dry pre-treatment is required for 0.5 inches times the entire project area. The required dry pre-treatment volume of 0.15 ac-ft will be met within the proposed exfiltration trench system onsite and a Concrete Vault. The proposed exfiltration system provides a total storage volume of 2.51 ac-ft. The 0.15 ac-ft requirement will be provided in the exfiltration trench. Please see the *Stage Storage Tabulation* below:

$$= (0.5'' \times 3.62\text{-acres} / 12 = 0.15 \text{ ac-ft})$$

**Dry Pre-Treatment Required = 0.15 ac-ft**

**Dry Pre-Treatment Provided = 0.95 ac-ft**

## Pre vs. Post Analysis

A Pre vs. Post analysis has been performed to model the existing condition and compare it to the proposed condition. Please see Appendix B for the Stage Storage tabulations and Cascade Model outputs. Cascade Models account for the difference as follows:

### SFWMD Rainfall Used for Modeling Purposes

Storm Event	Rainfall (Inches)
5-year, 1-hour	3.28
10-year, 1-day	8
25-year, 3-day	14
100-year, 3-day	18.5

### Maximum Stage

Storm Event	Pre (NAVD)	Post (NAVD)
5-year – 1-hour	10.21'	8.62'
10-year - 1-day	11.11'	9.90'
25-year - 3-day	11.45'	10.67'
100-year – 3day	12.33'	12.10'

### *Discharge Rate*

Storm Event	Pre (cfs)	Post (cfs)
5-year – 1-hour	(1) 0.34	(1) 0.17
10-year - 1-day	(1) 0.41	(1) 0.32
25-year - 3-day	(1) 0.43	(1) 0.38
100-year – 3-day	-	-

*\*100 - year – 3day Event has been modeled as a zero discharge condition.*

## **CONCLUSION**

In summary, the addition of 240 L.F. of exfiltration trench and a 34,541 square foot concrete vault will provide adequate storm water management to construct the proposed Culvers Restaurant and General Retail. Dry pre-treatment volume is being met within the 0.95 ac-ft of storage volume in the exfiltration trench. Water quality volume is being met by providing 0.95 ac-ft of storage volume in the exfiltration trench. The required storage volume to provide the 5 year – 1 hour level of service for the parking lot area will be stored in an underground detention system which will improve the existing flooding issue on the Wawa Parcel. In addition, the 100-year water surface elevation has also been demonstrated that it is below the proposed finished floor elevation of 13.00’

**MAP INFORMATION**

The soil surveys that comprise your AOI were mapped at 1:20,000.

**Warning:** Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service

Web Soil Survey URL:

Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Broward County, Florida, East Part

Survey Area Data: Version 13, Oct 2, 2017

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Dec 17, 2014—Feb 11, 2015

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

## Map Unit Legend

Map Unit Symbol	Map Unit Name	Acres in AOI	Percent of AOI
19	Margate fine sand, occasionally ponded, 0 to 1 percent slopes	0.4	18.2%
29	Pompano fine sand, 0 to 2 percent slopes	1.7	81.8%
<b>Totals for Area of Interest</b>		<b>2.1</b>	<b>100.0%</b>

## F. Water Storage

### A. Ground Storage

- One of the requirements for dry retention/detention flood protection areas is that each shall have a "mechanism" for returning the water level to control elevation. In such situations, the term "mechanism" is normally interpreted to mean something designed, fabricated, and installed in or on the site. As a result, almost every such project will have something - a V-notch weir, exfiltration trench, key/mosquito ditch, sump, etc. - to provide the required drawdown.

Such devices may not always be necessary. If it can be shown that the soil itself allows the water table to subside in an acceptable length of time, then no "artificial" mechanism need be installed. The burden of proof is on the applicant, and District staff will not approve, or recommend for approval, a dry system which does not provide such mechanisms, be they natural or fabricated.

- The moisture storage capability (S) of the soil profile has been estimated by the United States Department of Agriculture – Natural Resource Conservation Service (USDA – NRCS; fka Soil Conservation Service [SCS]) for the soils found within the SFWMD boundaries. The total amount of water which can be stored in the soil profile expressed as a function of the depth to the water table\* for these soils is:

<b><u>SOIL STORAGE</u></b>												
Depth to W.T.*	Coastal(1)				Flatwoods (2)				Depressional (3)			
	Uncomp. S (In.)	Uncomp. CN	Comp. S	Comp. CN	Uncomp. S (In.)	Uncomp. CN	Comp. S (In.)	Comp. CN	Uncomp. S (In.)	Uncomp. CN	Comp. S (In.)	Comp. CN
1	0.60	94	0.45	96	0.60	94	0.45	96	0.60	94	0.45	96
2	2.50	80	1.88	84	2.50	80	1.88	84	2.10	83	1.58	86
3	6.60	60	4.95	67	5.40	65	4.05	71	4.40	69	3.30	75
4	10.90	48	8.18	55	9.00	53	6.75	60	6.80	60	5.10	66

\*Typically, the Seasonal High Water Table. Consult with District staff regarding site-specific situations and questions.

- (1) Sandy soils 0 - 40" thick with water tables dropping below 40" - St. Lucie series is representative
- (2) Water tables 15" - 40" - Immokalee series is representative
- (3) Water tables above ground - 15" - Riviera and Pompano series are representative

The compacted values represent the cumulative water storage values reduced by 25 percent to account for the reduction in void spaces due to the compaction which occurs incidental to earthwork operations. An example of the use of this information is:

Assume the following:

Average Finished Grade = 17.0 feet NGVD

Average Ground Water\* Level = 14.0 feet NGVD

Percent of Project in Lakes = 15%

Percent of Project Impervious = 35%

Coastal Soil Type (compacted)
